matching contacts.

Delete contact

1.select contacts.

2.Press [option key]→delete contact

3.Check box next to the option to delete the contact.

4.Select delete→confirm

Tips:Also click want to delete the contact,Click the options button in the pop-up menu select delete.

Import or export contacts

In duplicate contacts between mobile phones, SIM card and memory card.

1.select contacts.

2.Press [option key]→import or export

3.Select export target→Next

4.Select import target→Next

5.Choose to export the check box next to the contacts or file

Set display options

You can set the address book shows the contact range.

1.select contacts.

2.Press [option key]→contact to show

3.Select the check box

Click into the storage condition to check the phone, the SIM card 1, 2 the capacity of the SIM card.

4.12 Gallery

Gallery to understand how to view photos and play video stored in the phone or memory card.

1.Select gallery.

2.If you would like to change the view mode,Selection screen to the left of the photo album,popup menu albums/place/characters/label,Select the display mode.

3.Choose to see the photos

Viewing photos,use the following options:

- If you would like to see more photos, can be left or right to scroll
- If you would like to zoom in and out, can use two fingers point live screen, and then to separate or closed fingers
- If you would like to start the continuous broadcast images of the selected folder, choose slide show.Click on the screen to stop running.
- If you would like to use the delete photos,Select menu→ Delete.
- If you would like to share photos，Select menu→ Share.
- If you would like to use the photos near function,select option key,popup menu,then use the following options：
    - ✓ Play PowerPoint：Let the pictures play automatically.
    - ✓ Edit：To edit photos.

34

- ✔ Rotate left：counterclockwise rotate the photo
- ✔ Rotate right：Clockwise rotate the photo
- ✔ Clip：Cutting image from the pictures.
- ✔ Set picture as：The image set as wallpaper or contact icon.
- ✔ Details：See photos for details.
- ✔ Print：Can connect printer to print.

4.13 Download
View this machine is currently downloaded or are downloading resource files.

4.14 Camera
4.14 相机
Understand the basic operations of a film and look at photos and video.Press ◉ → Switch to the camera/video panorama mode,enter the photo models/video/prospect model.
Tips:Switch to the gallery Sliding into the gallery to the left.

Take picture

1. Select camera → Enter the camera model.
2. The camera at the subject and to adjust.
3. Click ◉ take picture.Photos will be automatically saved.

Shoot video

1.Select camera,The lower left corner of the camera icon ◯, Select ◻ In video mode.
1. The camera at the subject and to adjust.
2. Click ◉ Start capture。

3. Click ⬤ Finish recording.The video will be automatically saved.

Shoot panorama

1. Select camera→Into a panoramic mode.
2. The camera at the subject and to adjust.
3. Click ⬤ take picture，mobile phones to the left or to the right.Photos will be saved automatically.

4.15 message

Learn how to create and send text messages (SMS) or MMS (MMS), and view or management has to send or receive information.

Notice:In the local service area to send or receive data may lead to additional costs. For more information, contact your network operator

Send message

1.Select message→write the new message→write

2.Select receiver Input the recipient phone number field

3.Select type message field to enter message,then click on the send icon button to send message.

Send MMS

1.Select message→write the new message→write

2.Press[option key] → Add theme →Select theme field enter the theme.

3.Select type message field to enter message.

36

4.Click 🔘 Add attachment,Such as photos, video, audio, electronic business CARDS, etc,then click on the send icon button to send information.

Tips：In the receiver can enter multiple recipients, and mass information or MMS.

Check the SMS or MMS

1.Select message,message is grouped by contact,shown as a form of dialogue.

- Click on the content of information for details.
- Also some live a session, in the pop-up menu, select the corresponding operation.

A custom set of message

1.Select message

1.Press [option key] → Setting.Customize the following options:

- Message function on/off
- The default SMS application：Set the default SMS application.

Storage Configuration

- Delete old messages:When set to limit the number to delete old information at any time.
- SMS limit:Set the maximum number of messages stored.
- MMS limit:Set the maximum number of MMS storage.

SMS Settings

- **Delivery Report:**Set up the network after the message delivery notice yourself.
- Management of the information in the SIM card:Management information stored in the SIM card.

MMS setting

- Delivery Report**:**Set up the network after the MMS served notice yourself.

- Read reports:Set up the network reading in the recipient MMS notification is yourself.
- automated retrieval:The phone is set to retrieve the MMS everywhere.
- When roaming access automatically:The phone is set to automatically retrieve the MMS when roaming.

notifications settings
- Notification:New information on the Settings are displayed on the status bar notification.
- Warning tone:Select new information.
- Vibration:Set the vibration when receiving massage.

4.16 Music

Use music player to listen to their favorite music.

Play music files

1. From the musician, albums, songs, play lists→ Choose the music file→ Play music
2. Use the following icons and buttons control playback process：

Icon/button	**Function**
❚❚	Pause:Select ▶ Play continues
◄	Return to previous file；fast reverse（press and hold）
►	Return to next file；Fast forward（press and hold）
☰	Open play list
⤨	Start the random pattern
⤸	Change the repeat mode
Volume key	adjust volume
Option key	Access option

Progress bar	Move finger can be shown from a particular point in the file to play in the progress bar

Add music files to play list

1. Select Music
2. Select Musicians/album/songs Label,press and hold to add a musician、album or song,In the pop-up menu Select Add to play list.
3. Select Current plat list,add music files to the current play list;Select New play list,enter the name of the new play list,select Save Create new play list and add music files.

tips： If you would like to add the current broadcast music files to the playlist,in the play music screen,long press the name of songs→ Add to play list

Set the music as ring tone

If you would like to set play music in the list of files to ring tones：
1. Select Music→click option key→select use to ring tone

4.17 File Manager

File manager can be accessed using the fuselage and the memory card to store all of the images, video, music, sound clips, and other types of files,after the fuselage storage into the phone or memory card， can classification browse,can be deleted, duplicated, share, search, and so on。

New files

1.Enter the file manager,choose to enter the fuselage storage or memory card
2.Click on the lower left corner of the menu,select "New file"

Delete files

Enter the file manager,find files to delete,long press,in the pop-up dialog box,select "delete"

Copy(move) files

1.Enter the file manager,under the "all" category,find files to copy(move),select the file
2.To the need to copy files,click on the bottom left menu
3.In the pop-up dialog box,select"Copy selection here"("Move selection here")

Share files

1.Enter the file manager,under the "all" category,select and long press the files want to share
2.In the pop-up dialog box,select "Send",you can share through bluetooth, E-mail, SMS, etc.

Search for files

Click on the icon where is the lower right corner like a magnifying glass,enter file name or file
format,you can search for files.

View file properties

1.Enter the file manager,under the "all" category,select the file want to view file want to view
file property.
2.Click on the lower left corner of the menu,in the pop-up dialog box,select "pro[erty",you can

view file property which you select.

4.18 Video

Using video player play video from mobile phones.

Icon/Button	Function
■	Pause and play；Select ▶ continue to playing.
◄◄	Fast reverse
►►	Fast forward
✕	Change the size of playing interface
◄	Share files
⋮	Set sound,cycle and ect。
音量键	Adjust volume
进度条	Use a finger to drag play in the progress bar

5. Phone configuration

It includes manual, certificate, warranty card, charger, data cable.

6. Appendix

common problem

When operating the phone, if you feel abnormal, please refer to the following issues and

solutions. If this does not solve the problem, please contact your dealer or service provider.

common problem	CAUSE	Solution
SIM card error	SIM card is damaged	Contact your network service provider
	SIM card is not installed	Check the SIM card
	SIM card metal surface dirt	Wipe with a clean cloth
Poor reception	Use of mobile phones in poor reception areas, such as tall buildings or near the basement, radio waves can not effectively communicate	Signal good position to answer the call
	Intensive use of mobile phones during the call, causing congestion caused by the line can not call	Try to avoid
Can not boot	The battery is exhausted	Replace with new batteries
Unable to call	Use a ban calls	Unblock Call
Unable to connect to the network	SIM card is invalid	Contact your network service provider
	Beyond the GSM service area	Move to the network service provider service area

	The signal is weak	Move to where the signal is strong retry
Will not charge	Voltage range marked inconsistent with charger	Please use the same voltage charger label
	Using non-standard charger	Please use this machine dedicated charger
	Poor contact	Check plug is connected

Tips: The operating system supports only official upgrade, such as the user's own brush unofficial system, leading to security risks and loss responsibility of the user (possible risks include: user information was stolen, automatically send text messages, your location, etc).

FCC Statement

1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference.

(2) This device must accept any interference received, including interference that may cause undesired operation.

2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide

reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV technician for help.

SAR Information Statement

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. * Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple

power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when tested for use at the ear is 0.906**W/Kg** and when worn on the body, as described in this user guide, is **1.040W/Kg**(Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements). The maximum scaled SAR in hotspot mode is 1.189W/Kg. While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RFexposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of http://www.fcc.gov/ oet/fccid after searching on

FCC ID: 2ADOV-V4Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Asso-ciation (CTIA) web-site at http://www.wow-com.com. * In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a sub-stantial margin of safety to give additional protection for the public and to account for any variations in measurements.

Body-worn Operation

This device was tested for typical body-worn operations. To comply with RF exposure

requirements, a minimum separation distance of 15mm must be maintained between the

user's body and the handset, including the antenna. Third-party belt-clips, holsters, and

similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
